Brainstorm & Idea Prioritization Template

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. For this project, the brainstorming activity focuses on identifying practical ideas to automate the software installation request process using ServiceNow.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected Problem Statement

An employee requests installation of licensed software through the Service Catalog. The request requires approval and IT fulfillment. A standardized ServiceNow workflow can automate the approval and task-creation process, reduce manual effort, and provide clear tracking of the request.

Project Requirements

Software Requirements

- ServiceNow instance (Personal Developer Instance or Enterprise Instance)
- Flow Designer enabled
- Email Notification and Email Script support

Hardware Requirements

- Standard desktop or laptop computer
- Minimum 4 GB RAM (8 GB recommended)
- Stable internet connection

Step-2: Brainstorm, Idea Listing and Grouping

The following ideas were generated and grouped according to the main activities involved in the software installation request process.

Request Management

- Create a Service Catalog item for software installation requests.

- Collect employee details and required software details through the request form.

Approval

- Route the request for manager approval.
- Use Flow Designer to automate the approval process.
- Update the request according to the approval decision.

Fulfillment

- Create a Catalog Task after approval.
- Assign the task to the appropriate IT team.
- Update the task when the software installation is completed.

Notification

- Send an email when approval is required.
- Send an email when the request is approved or rejected.
- Send an email when the installation task is completed.

Tracking

- Allow the requester to view the request status.
- Maintain the request and task history for reference.

Step-3: Idea Prioritization

The ideas are prioritized based on their importance to the project and their feasibility within a ServiceNow Personal Developer Instance.

Idea	Importance	Feasibility	Priority
Service Catalog software request form	High	High	1
Automated manager approval	High	High	2
Create Catalog Task after approval	High	High	3
Request status tracking	High	High	4
Email notifications	Medium	High	5

Final Selected Idea

Automate the licensed software installation request using a ServiceNow Service Catalog item, Flow Designer approval, and Catalog Task creation.

Reason for Selection

This idea is selected because it directly addresses the problem statement, reduces manual processing, provides a structured approval process, and is feasible to implement using the available ServiceNow features.
