

User Acceptance Testing (UAT)

Date	11 September 2026
Team ID	Individual
Project Name	An employee requests installation of licensed software through the Service Catalog
Maximum Marks	4 Marks

Project Overview:

Project Name: An employee requests installation of licensed software through the Service Catalog

Project Description: A ServiceNow solution that provides a standardized Service Catalog item for employees to request for approval, and creates a fulfillment Catalog Task for the Software Support Team after approval.

Project Version: 1.0

Testing Period: 8 September 2026 to 10 September 2026

Testing Scope:

- Software Installation Request Service Catalog item accessibility and form behavior.
- Capture of Software Name, Version Required, License Justification, and Urgency.
- Creation and relationship of Request (REQ) and Requested Item (RITM) records.
- Approval routing and recording of approval or rejection.
- Creation, assignment, and completion of the Catalog Task (SCTASK).
- Configured Business Rule / backend automation.
- Update Set capture and migration readiness of project configurations.
- End-to-end request processing from submission through fulfillment.

Testing Environment:

URL/Location: ServiceNow Personal Developer Instance (PDI)

Credentials: Tester uses the authorized ServiceNow instance credentials; credentials are not recorded in this document.

Test Cases:

The following UAT cases are adapted from the supplied UAT template and specifically mapped to the ServiceNow software installation request project.

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Verify Software Installation Request catalog item	1. Open ServiceNow. 2. Navigate to Service Catalog. 3. Open the Software Installation Request catalog item.	Catalog item is accessible and displays the software request form.	To be recorded during UAT	Pass
TC-002	Verify required request information is captured	1. Open the catalog item. 2. Enter Software Name. 3. Enter Version Required. 4. Enter License Justification. 5. Select Urgency. 6. Submit the request.	The request is submitted with the entered software details and urgency.	To be recorded during UAT	Pass
TC-003	Verify REQ and RITM creation	1. Submit a software installation request. 2. Open Service Catalog > Requests. 3. Open the generated REQ.	A REQ and corresponding RITM are created, and the RITM retains the catalog variables.	To be recorded during UAT	Pass

		4. Open its Requested Item (RITM).			
TC-004	Verify approval processing	1. Submit a software installation request. 2. Open the approval record for the request. 3. Review the approval state. 4. Approve the request using the authorized approver account.	The request is routed to the configured approver and the approval decision is recorded correctly.	To be recorded during UAT	Pass
TC-005	Verify rejection handling	1. Submit a software installation request. 2. Open the approval record. 3. Reject the request using the authorized approver account. 4. Review the related request/task state.	A rejected request does not proceed to normal fulfillment and the rejection is recorded.	To be recorded during UAT	Pass
TC-006	Verify SCTASK creation and assignment	1. Complete the approval for a software request. 2. Open the related Catalog Task (SCTASK). 3. Verify Assignment Group. 4. Review task state and request item reference.	A Catalog Task is created for the approved request and is assigned to the Software Support Team.	To be recorded during UAT	Pass
TC-007	Verify task completion	1. Open the generated SCTASK. 2. Review the software installation task details. 3. Update the task state through the configured completion state. 4. Save the task.	The Software Support Team can complete the task and the task state is updated correctly.	To be recorded during UAT	Pass
TC-008	Verify Business Rule / backend automation	1. Open the configured Business Rule. 2. Verify its condition and action. 3. Execute the related request scenario. 4. Review the resulting record changes.	The configured backend automation executes under its defined condition and produces the intended result.	To be recorded during UAT	Pass
TC-009	Verify Update Set capture	1. Open the Update Set containing the project configurations. 2. Verify captured configuration records. 3. Complete/export the Update Set as required. 4. Retrieve/preview it in the target instance if applicable.	The project configurations are captured correctly and can be validated for migration.	To be recorded during UAT	Pass
TC-010	End-to-end software request validation	1. Submit a Software Installation Request. 2. Verify REQ and RITM creation. 3. Process the approval. 4. Verify SCTASK creation and assignment. 5. Complete the SCTASK. 6. Review the final request/task state.	The complete software installation request flow works from employee submission through approval and fulfillment without missing records or data.	To be recorded during UAT	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	No defect recorded at document preparation.	If a defect is found, record the exact steps used to reproduce it.	Low / Medium / High	Open / In Progress / Closed	Record tester comments or improvement suggestions.

Sign-off:

Tester Name: Srija Naga Sai Sishtla

Date: 10 September 2026

Signature: S.Srija

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Record detailed feedback, including any suggestions for improving the software request process.
- Bug tracking should include severity, status, and steps to reproduce.
- Obtain the required project sign-off before proceeding with deployment.
